Duration:

Full stack -> 1.5 Months

WEBTOON

Life Cycle

API

An API, which stands for Application Programming Interface, is a set of rules, protocols, and tools that allows different software applications or systems to communicate with each other. It defines the methods and data formats that applications can use to request and exchange information or perform specific tasks.

Back end vs Front end vs Full stack

Front-End

- The "Client-side" or Front-end side refers to what users see and interact with.

Back-End

- The "Server-side" or back-end side refers to how everything works.

Full Stack = Front-End + Back-End

Thank You
